Subject: RE: Water Main Replacement?
Attachments: ATT00001.txt

As I currently understand it, the water main replacement would be completed by Indiana-American Water Company, so most likely a separate contractor from our excavation work. Since they should not encounter impacted soil (assuming a 4 foot deep trench a few feet wide which will be located away from the sanitary sewer line), I do not believe they will have any direct association with Amphenol, nor the sanitary sewer replacement efforts. However, I am sure we will be coordinating with them closely during their excavation (if it does actually take place).

I understand that you don't have access yet to all the information because this is a "new plan," but do you expect that this would be a different excavation contractor from the contractor Amphenol is hiring for the remedial work? Or is the City hiring the excavation contractor but under Amphenol oversight?

Thanks.

Subject: RE: Water Main Replacement?

In general, the water main runs along the west side of Forsythe Street (along the edge of the street) and the north side of Hamilton Avenue (along the edge of the street).

I would expect that they are approximately 4 feet deep, well above any soil impacts, and possibly do not extend into Unit B.

However, since the road surface will be removed and replaced for our sewer excavation activities, that would be an optimal time to replace the water main in order to reduce inconvenience and additional surface restoration that would otherwise have to occur at a separate time.

If the water mains are not on your site plans, then potentially they are along the opposite side of the street from the sewer line?

I would think that this plan would have implications for the excavation work.

No, but I would not expect to be as it should not impact the soil remediation. I don't believe we even have a site plan with the water mains.

Hi Joe,

Last Friday, Trent Newport told me that there is a new plan to replace the water mains at the same time the sewers are being replaced in the remedial area.

Are you aware of that plan?

Thanks.

Carolyn
